

SKINSCAPE 360

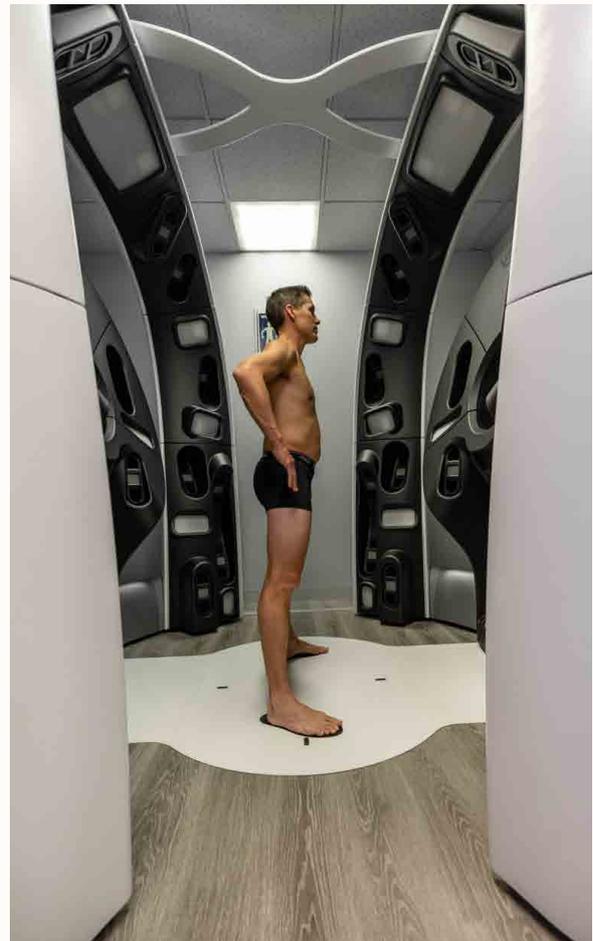

Worried about that spot? Get a 3D Skin Cancer scan today.

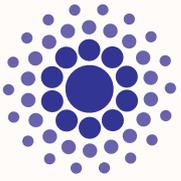

Take control of your skin health with SKINSCAPE 360 imaging's advanced skin cancer detection and surveillance technology. We take 92 photos in 1 second and render a full 3D avatar of your skin in 5 minutes. You can use it at home to check for any changes and share it with your doctor.

3D Skin Cancer Scans are the future of skin cancer detection

A 3D Skin Cancer Scan is superior to conventional 2D Total Body Photography as it lets you easily see and monitor all visible worrying spots or moles on your skin. In under 5 minutes, it provides:

- A 3D Avatar of your body and all detectable spots over 2 millimetres.
- A full spot-count analysis - ideal for people with many spots that are difficult to track.
- The ability to easily rotate around your 3D Avatar and zoom in for a closer look at a spot that you may be concerned about.
- AI analysis of change over time.

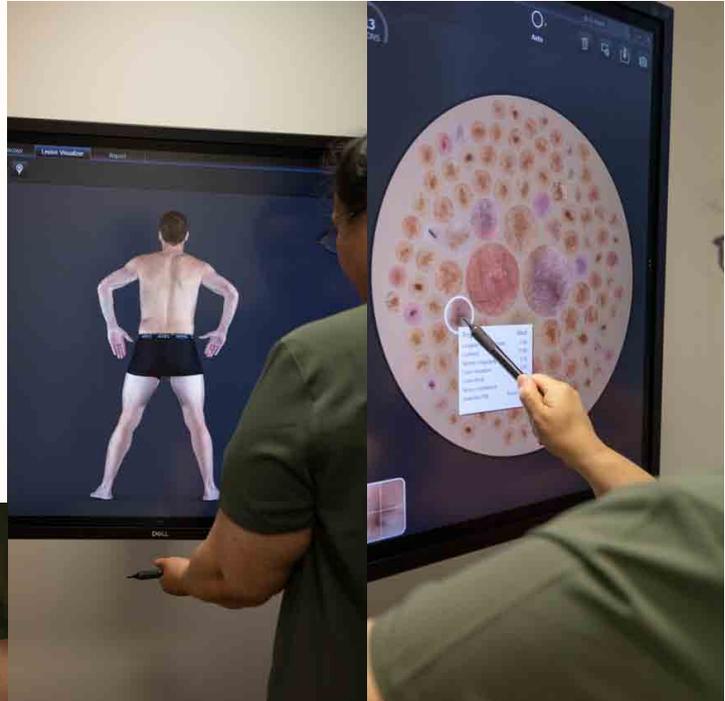

SKINSCAPE 360

What happens next?

You can access your images via the patient portal on our website or we can share with your Skin Cancer specialist. We can conduct a 30-minute Dermoscopy Scan to take magnified photos of any worrying spots if they need investigating. You'll then get a report to discuss with your doctor.

Take advantage of the advanced technology.

Both **3D Avatars** and magnified **Dermoscopic** images can be easily compared next time in 3, 6 or 12 months. Being able to compare photos will help you and your doctor track any changes. Remember, early detection saves lives.

Bookings are now open!

ABOUT SKINSCAPE 360

SKINSCAPE 360 is a skin cancer detection and surveillance clinic that supports patients and medical professionals in the early detection and investigation of potentially cancerous spots. As a specialist imaging service, we provide our services to the general public, plastic surgeons, dermatologists, skin cancer clinicians and general practitioners.
